

ABSTRACT OF THE DISCLOSURE

A dispenser is disclosed which is capable of dispensing articles from two locations. The dispenser includes first and second members pivotally connected together by a first  
5 hinge to form a first entrance into the dispenser. The first and second members are capable of housing a plurality of wet or dry, sheet-like articles. The first entrance provides reach-in access wherein multiple sheet-like articles can be withdrawn at one time. The second member also has a second entrance formed therein from which the sheet-like articles can be individually withdrawn. The dispenser further includes a third member  
10 secured to the first member by a hinge that is coaxially aligned with the first hinge. The third member is capable of pivoting on its hinge to cover the second entrance.
